ABOUT

Backend-focused Software Developer experienced in building scalable APIs and system components using Java, Spring Boot, and .NET. Strong interest in system architecture, performance optimization, and building reliable production systems. Eager to contribute to impactful engineering teams and grow as a backend engineer.

SKILLS

Programming Language	Java, C#, TypeScript, JavaScript, C
Backend Development	Spring Boot, Spring Security, JPA/ Hibernate, ASP.NET Core, REST API
Frontend Development	React, TypeScript, MUI, Ant Design
Database	MySQL, SQL Server, MongoDB
DevOps & Cloud	Docker (Basic), AWS ECS, Linux
Tools	Git, GitHub, GitLab, Firebase
Languages	English (Fluent)

EDUCATION

FPT UNIVERSITY 2022 - 2025
SOFTWARE ENGINEERING

WORK EXPERIENCE

1BYTE SOFTWARE Software Developer	01/2025 - 12/2025
- Contributed to a Scrum team developing .NET APIs and integrating front-end features using React. - Implemented UI components with cross-browser compatibility based on design requirements. - Optimized SQL Server queries and stored procedures, reducing API response time to under 500ms. - Used Firebase for real-time data handling and authentication. - Optimized database queries to achieve response times under 0.5 seconds. - Participated in sprint planning and feature discussions throughout the development lifecycle.	
FPT SOFTWARE - SCM.DMS Intern Software Developer	09/2024 - 12/2024
- Developed custom JavaScript parsers to convert legacy RPG code into Java and Spring Boot services. - Built WinForms (.NET) tools to support migration testing between RPG and Java modules. - Collaborated with a cross-functional team to modernize IBM legacy systems into scalable Spring Boot services.	

PROJECT

Ecommerce Microservices

02/2026 - 03/2026

Team size: 1

[Github](#)

Description: A self-learning microservices project simulating an ecommerce platform with distributed services for product, order, and user management.

Responsibility:

- Architected a distributed ecommerce backend with 5 Spring Boot 3.2 microservices, API Gateway (JWT auth, Redis rate limiting, Resilience4j circuit breakers)
- Implemented Saga pattern via Apache Kafka across 3 topics to orchestrate distributed order/inventory transactions with eventual consistency
- Built secure Auth Service with JWT access/refresh token rotation, Redis-based token blacklisting, and 8+ RESTful APIs with global exception handling and pagination
- Containerized the full platform with Docker Compose including MySQL, Redis, Kafka, and Zookeeper for reproducible development environments

Technologies Used: Java, Spring Boot, Spring JPA, Spring Security, JWT, OAuth2.0, Apache Kafka, AWS ECS

Dental Clinic Booking

05/2024 - 8/2024

Position: Backend Developer

Team size: 4

[Github](#)

Description: An appointment system for a dental clinic.

Responsibility:

- Implemented authentication and authorization using JWT and OAuth2.
- Integrated VNPAY API for secure and seamless payment processing.
- Designed and maintained the database schema and backend business logic.
- Built and documented RESTful APIs for appointment scheduling, user management, and billing.

Technologies Used: React, Typescript, MUI, Jest, ASP.NET Core, SQL SERVER, AWS S3, VNPAY.

ACTIVITIES

F-Code

2022-2024

- Participated in C programming language training for new members.
- Attended on various workshops in technology field.
- Showed club achievements to others.

APEA

2022-Now

- A children’s charity fund.
- Organized and participated in fundraising activities.

INTERESTS

- Football
- Basketball
- Running
- Coffee enthusiast

HONORS AND AWARDS

- Good Performance Student Summer 2024
